

Kartavya Raina

Profile

I'm a Computer Science graduate with keen interest in Artificial Intelligence technology looking forward to building my career around the same. I love solving problems and finding best possible solutions for them; for the really tough ones, I'm always devoted to find the most suitable workarounds to keep the horses running. When away from tech, I devote my time to music and my camera and try to capture nature and its beauty from my perspective!

Employment History

Associate Engineer, Ericsson India, Noida

JAN 2024 — PRESENT

- US-Based telecom service provider; based in Chicago.
- Worked in the domain of Non-Prod Software Testing.
- Deployed code snippets or hot-fixes in non-live environments and performed server sanity checks before releasing the Envs to Testing Team.
- Worked on Jenkins tool and helped with ideation phase of pipeline building for the same.

Intern, Ericsson Global Services India, Noida

JUL 2023 — JAN 2024

- Singapore based telecom company which had VoLTE data processing dependency on Ericsson.
- Monitored VoLTE Live Node for UNN Maxis and prepared hourly and weekly reports based on the metrics. Performed Node Health Checks and accessed UNN files/libraries via PuTTY commands.

Intern, Ericsson Global Services India, Noida

FEB 2023 — JUL 2023

- Singapore based telecom company which had VoLTE data processing dependency on Ericsson.
- Monitored VoLTE Live Node for UNN Maxis and prepared hourly and weekly reports based on the metrics. Performed Node Health Checks and accessed UNN files/libraries via PuTTY commands.

Software Developer Intern, Innodata India, Noida

JUN 2021 — AUG 2021

- Built and modified the company website.
- Worked on debugging and updating their internal management tool VYOM.
- Implicated the concepts of HTML and CSS Libraries.
- Worked on VS Code for development.

Education

Bachelor's in Technology, Dehradun Institute of Technology, Dehradun

JUN 2019 — JUN 2023

Senior Secondary Schooling, ASN Sr. Sec. School

MAR 2017 — APR 2019

Details

Projects

Personal AI Agent

OCT 2025 – PRESENT

Currently developing a custom Python-based AI agent (“PAI”) to automate personal tasks and explore the practical capabilities of modern AI. I am using this project to deepen my understanding of how AI models can be combined with Python to build intelligent, user-focused tools.

- Building a lightweight agent framework that interprets natural-language instructions and performs corresponding actions.
- Integrating existing AI model APIs to enable conversational interactions, contextual responses, and dynamic task execution.
- Adding modular “skills” such as file reading, data extraction, reminders, and simple workflow automation.
- Continuously experimenting with extensions like memory modules, external API integrations, and more advanced automation features.
- Using this project as an ongoing learning journey to explore how AI technology can be paired with Python to create a practical personal assistant.
